EDUCATION

2018 - 2023
Diploma in Animation and VFX
eQuinoxx, Ahmedabad

2019 - 2024
BCAMUL
BAOU, Ahmedabad

TECHNICAL SKILLS

Gameplay Programming

Blueprint Scripting
Game Framework Architecture
System Design
UI/UX Implementation

Engine & Performance

Scene Optimization
Material Pipelines
Lighting & Rendering
Real-Time Performance Profiling

Tools

Unreal Engine 5
Git/GitHub
Maya
Substance Painter

PROFILE

Unreal Engine Developer specializing in Blueprint gameplay programming, including inventory systems, interaction frameworks, component-based architecture, save/load systems, and modular game design. Brings a strong technical understanding of Unreal's rendering and performance pipelines, enabling efficient collaboration across art and engineering teams.

FEATURED PROJECT

Third-Person Survival Prototype
A single-player gameplay systems prototype focused on modular architecture and scalable design.

- Built an interface-driven, component-based interaction framework supporting multiple actor types (pickups, tools, environment objects) determined by proximity and gameplay tags.
- Developed a slot-based inventory with drag-and-drop rearrangement, contextual item usage (consume, equip, fuel), and world-drop that spawns removed items back into the scene.
- Implemented save and load system with full game state persistence across sessions.
- Designed player systems (health, stamina) with real-time UI feedback, contextual regeneration, and environmental damage handling.

PROFESSIONAL EXPERIENCE

October 2022 - Present
Unreal Engine Artist / Developer
Wildchild Studios, Ahmedabad

- Developed optimized real-time Metahuman scenes, managing character setup, materials, and performance profiling in Unreal Engine 5.
- Handled scene-level optimization including draw call reduction, texture streaming, and lighting performance tuning.
- Built environment scenes with focus on asset optimization, LOD management, and rendering performance.
- Collaborated with programmers to integrate art assets into gameplay and cinematic systems, bridging the art-to-engine pipeline.
